

## Research Notes Template - Team Name

---

Date:

*June 6<sup>th</sup>, 2025*

Researcher(s):

*Christopher Gibbs*

Objective of research:

*Research different wiring diagram softwares and decide which one(s) would be best for the team to use*

Notes:

| Software           | Pros                                                                                                                                                                                                        | Cons                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LabView            | <ul style="list-style-type: none"><li>-Free community edition license</li><li>-Free license for A&amp;M students</li><li>-Used in many industries</li><li>-Easy to use without programming skills</li></ul> | <ul style="list-style-type: none"><li>-Lots of features in gui are “hidden” because they only have a symbol so they are hard to find</li></ul>                                                                                                                                                                                                             |
| Autocad Electrical | <ul style="list-style-type: none"><li>-Free with student subscription</li><li>-Industry standard</li><li>-Can add pneumatics if necessary</li></ul>                                                         | <ul style="list-style-type: none"><li>-Can take a while to get used to</li></ul>                                                                                                                                                                                                                                                                           |
| SkyCad             | <ul style="list-style-type: none"><li>-Free standard license</li><li>-Very user-friendly</li><li>-Tutorials accessible on SkyCad website</li></ul>                                                          | <ul style="list-style-type: none"><li>-Free version is not very good for pneumatics if we need that in the diagram</li><li>-Only available for Windows OS</li><li>-Free license has many limitations such as no pin-to-pin wiring lists, see detailed limitations at <a href="https://skycad.ca/features.php">https://skycad.ca/features.php</a></li></ul> |

|       |                                                                                                                                                                                                        |                                                       |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| KiCad | <ul style="list-style-type: none"> <li>-Free</li> <li>-Open-source</li> <li>-No built-in pneumatic symbols but you can easily import symbols</li> <li>-Able to split up SID into subsystems</li> </ul> | -Not used often in the real world (engineering firms) |
